

# IgG4 & RPF

## ARE YOU INTERESTED IN PARTNERING WITH US TO IMPROVE YOUR MANAGEMENT?

IgG4-related disease and retroperitoneal fibrosis (RPF) are two groups of overlapping rare diseases. The common features include inflammation of various organ systems resulting in **pain, organ obstruction & failure**.

We are aware that the diagnosis is often difficult and there is currently no approved therapy.

Help us to understand living with these conditions to help shape future research.

We are keen to **work together** with patients and their carers in order to learn more about these rare conditions and improve treatment

## How?

A half day of interactive discussions with health care professionals

### 2ND MARCH 2019

10 AM

58 Prince's gate  
South Kensington  
London SW7 2PG

## What you can help us with

- 1 You and your carer's **personal experience of living with the condition** and the **effect of current treatments**
- 2 Tell us of any **unmet needs**, to help shape and design future research which benefits you.
- 3 To encourage the **patients' and public involvement** in all stages of research

how to register

✉ : [f.tam@imperial.ac.uk](mailto:f.tam@imperial.ac.uk)  
☎ : 0203 313 5171

Contact: Professor Frederick Tam  
Ken and Mary Minton Chair of Renal Medicine/Hon. Consultant Nephrologist

Patients' and/or their carers are invited.

Payment for time is as per NIHR guidance, and travel expenses are reimbursed. Refreshments are also provided.

We have limited spaces available, so please email/call us to register your interest. More information will be provided at a later stage.
